

ZYVORAI LABS · CUSTOMER DOCUMENTATION

Admin Basics

2026-08-29

Ports

Port	Service
5110	REST + Storage Center UI (ATLAS_BIND_ADDR)
5111	gRPC (ATLAS_GRPC_ADDR ; empty disables)
30511	Common cluster REST/UI NodePort
30512	Common gRPC NodePort
30543	Optional HTTPS NodePort

Always document hosts as `<host>` — never paste lab IPs into customer runbooks.

Auth

- Lab: `ATLAS_AUTH_REQUIRED=0` (open).
- Production: `ATLAS_AUTH_REQUIRED=1` + JWT secret (`atlas-gateway-auth`); weak defaults rejected at start.
- Mint tokens: `POST /api/atlas/v1/auth/tokens` , or paste into the rail **key** icon.
- Local users: **GOVERNANCE** → **Access** → **Create user**.
- CLI: `--token` / `ATLAS_TOKEN` ; API base `/api/atlas/v1/...`.
- Unauthenticated: `/health` , `/metrics` .

Install sketch

```
make run # local gateway CLI  
tlasctl health  
tlasctl discover
```

Open `http://<host>:5110/` . Cluster: follow product deployment docs / Ceph gateway manifests.

Operate from the console (admin)

1. Confirm `/health` and Command Deck health chip.
2. **Backends** registered → **Volumes** can provision.
3. Pause / cordon only from **Maintenance** when you mean to quiesce.
4. Mutations return `202` + job id — watch **Jobs** (UI or gRPC `WatchJob`).
